## ABSTRACT

Ethnomedicine is the study of ethnography of health and healing behaviour in various societies. It also refers to the study of traditional medical practice. It encompasses methods of diagnosis and treatment; to looks at cultural conceptions of the body, health and illness. It focuses on health behaviour as a way to learn about social values and social relations. The present research will address the problem of how people two different castes (Sonar & Rajput) with distinct efficacy of traditional health care practices; the prevalence of illnesses and the distribution of knowledge about illness attributes; the negotiations and instantiation of illness identities; the power of discourse to produce as well as cure affliction; discourse as moral commentary; linkages between medico-religious institutions, models of self, power and the state inhabiting in tehsil Bhatpar Rani of Deoria district.

**Keywords:** Health, Disease, Medicine, Ethno-medicine, Epidemiological

## 1. INTRODUCTION

All cultures have systems of health beliefs to explain what causes illness, how it can be cured or treated, and who should be involved in the process. The extent to which patients perceive patient education as having cultural relevance for them can have a profound effect on their reception to information provided and their willingness to use it. Anthropologists using cultural perspective to understand disease patterns view human populations as biological as well as cultural entities. These factors interact and then interaction may be health promoting or deteriorating. Thus, conceptually the health of individuals and whole community may be considered to be the result of many interactions, enumerates the determination of health, these determinants are biological determinants, behavioural, socio-cultural condition, and environmental.

## 2. OBJECTIVE

The main purpose of present study was to investigate the various construction of the universe of illness and disease; and cure from both an emic and etic point of view i.e. naturalistic and medical systems in culturally diverse environments.

## 3. MATERIALS AND METHODS

The present study was undertaken in the rural areas of Uttar Pradesh with two caste groups of Bhatpar Rani, Deoria District. There are 326 villages spread out regions in tehsil Bhatpar Rani; as for the sample division from sampled village, 400 household were selected from both caste group. The total sample size selected for the study includes 800 households, taken equally from both the caste group.

**Table 1- Population covered by the Study**

| Caste         | Number of Households | Number of Persons | Size of the Households | Percent |
|---------------|----------------------|-------------------|------------------------|---------|
| <b>Rajput</b> | 400                  | 2040              | 5.1                    | 54.3    |
| <b>Sonar</b>  | 400                  | 1720              | 4.3                    | 45.7    |
| <b>Total</b>  | 800                  | 3760              | 4.7                    | 100.0   |

The respondents were interviewed at their residence and community were judged by observation, group discussion and informal interview and discussion with the subjects. Thus the data collected are both quantitative and qualitative ones. The unit of analysis was head of households. The data analysis was done using the Statistical Package for Social Sciences (IBM SPSS Statistics 17.0).

## 4. RESULTS AND DISCUSSION

The links between culture and health have been examined mostly at the micro-level in epidemiological studies. The objective of research describes more a profiling nature of the fieldwork output along with the comparisons in terms of distinct aspects of the area.

### 4.1. Causes of death among the Sonar and Rajput

There are 112 death cases reported from households where 8.9 percent deaths due to heart diseases and 3.5 per cent deaths due to other reasons where people do not know the reasons of death. 7.1 per cent deaths are due to cancer and diabetic both and another 0.8 per cent due to respiratory infections. There are 6.2 per cent of deaths due to complications in pregnancy. While comparing these data, it is evident that the rate of Encephalitis is very high among the Sonar and Rajput that is up to 16.9%; in which percentage of encephalitis cases found among Rajput are more.

**Table 2- Causes of death among Rajput and Sonar**

| Causes of Deaths       | Caste Group |      |       |      | Total |      |
|------------------------|-------------|------|-------|------|-------|------|
|                        | Rajput      |      | Sonar |      |       |      |

| Missing System         | 331         |      | 357   |      | 688   |      |
| Total                  | 400         |      | 400   |      | 800   |      |

**4.2. Usual practice in pregnancy regarding food**

Table 3 gives the vivid picture where 406 household believe that during pregnancy take some more proper food; there is consistency also found among 213 household which prefer more food in compare to normal food. This may be due to the fact that for the health the amount of energy required more during pregnancy. The rest 135 of the experience elder among household head of both caste group believe that several food are not good during pregnancy so they restricts these food up to delivery and were attended by the health worker once or twice only.

**Table 3- Usual practice in pregnancy regarding food**

| Caste Group | Usual practice in pregnancy regarding food |      |                           |      |  |      |                      |     | Total |     |
|-------------|--|------|---------------------------|------|--|------|----------------------|-----|-------|-----|
|             | Take some more food                        |      | Take food use than normal |      | Restricts some cereals, fruits, vegetables drink |      | Take the normal food |     |       |     |
|             | No   | %    | No                        | %    | No   | %    | No                   | %   | No    | %   |
| Rajput      | 214  | 53.5 | 92                        | 23   | 76   | 19   | 18                   | 4.5 | 400   | 100 |

| Total       | 406  | 50.8 | 213                       | 26.7 | 135  | 16.8 | 46                   | 5.7 | 800   | 100 |

**4.3. Family used Traditional Herbs and Shrubs for Family Planning/ Abortion/Sterility**

Figure 1 shows number of abortions is comparatively less among the Sonar and Rajput and the primary data shows that several people used herbs or shrubs for family planning/abortions/sterility etc.

Figure 1- Family used Traditional Herbs and Shrubs for Family Planning/Abortion/Sterility

**4.4. Incidence of Illness**

From the analysis of the following table on incidence of illness among the Rajput and Sonar, there are 2077 people 55.2 percent of the sample population have either general or acute and chronic diseases. Among them, 1370 people (66 per cent) who have acute and general diseases. 37.7 per cent of them had fever which is very high among the incidences of illness. The other acute or general illness is stomachache (11.3 per cent), headache (9.9 per cent), and infection (4.7 per cent) Diarrhoea (2.4 per cent). There are 5.2 per cent (106 persons) have other minor ailments as others like scabies, accidents, arthritis, sore eyes etc.

Table 4- Incidence of illness among Rajput and Sonar

| Type of illness        | Caste Group |      |       |      | Total |      |
|------------------------|-------------|------|-------|------|-------|------|
|                        | Rajput      |      | Sonar |      |       |      |
|                        | No          | %    | No    | %    | No    | %    |
| Fever                  | 477         | 42.8 | 308   | 31.9 | 785   | 37.7 |
| Headache               | 83          | 7.4  | 123   | 12.8 | 206   | 9.9  |
| Stomachache            | 94          | 8.5  | 139   | 14.5 | 233   | 11.3 |

| Other                  | 79          | 7.1  | 27    | 2.8  | 106   | 5.2  |
| Total                  | 1113        | 100  | 964   | 100  | 2077  | 100  |

#### 4.5. Attitude and Awareness towards Herbal Medicine

There are 76.3% household among Rajput and 82.7% among Sonar that have heard of herbal medicine but do not use it. There are only few that are about 17% of both caste group people who use herbal medicines in which percentage of Rajput are higher than Sonar that is about 22.2%. This shows that there are informal means of knowing about health aspects, but formal ways are not made use of herbal medicines, about 23% of total household do not know about herbal medicine from both the community.

**Table 5- Caste wise distribution of Knowledge and using of herbal medicine**

| Do you use herbal medicine? | Caste Group |      |       |      | Total |      |
|-----------------------------|-------------|------|-------|------|-------|------|
|                             | Rajput      |      | Sonar |      |       |      |
|                             | No          | %    | No    | %    | No    | %    |
| Yes                         | 89          | 22.2 | 52    | 13   | 141   | 17.7 |
| No                          | 305         | 76.3 | 331   | 82.7 | 636   | 79.5 |
| Do not Know                 | 6           | 1.5  | 17    | 4.3  | 23    | 2.8  |
| Total                       | 400         | 100  | 400   | 100  | 800   | 100  |

#### 4.6. Preferred System of Medicine among the Sonar and Rajput

Among the Rajput, 85.3 percent households and Sonar are about 79.7 percent prefer Allopathic in compare to Homeopathy it is about 3 to 11.7 respectively; the general trend of Ayurveda is 9 to 7 respectively that is low among Sonar in compare to the Rajput. In the case of Homeopathy, the Sonar households have better preference for homeopathy than Ayurveda.

**Table 5- Caste wise preference and practice of system of medicine**

| System of medicine | Caste Group |      |       |      | Total |      |
|--------------------|-------------|------|-------|------|-------|------|
|                    | Rajput      |      | Sonar |      |       |      |

### 5. ETHNO MEDICINAL OBSERVATIONS

India with its glorious past of traditional medical system and use pattern of different plants, and it is one of the major centres of origin and diversification, having rich biodiversity. Botanically derived medicinal have played a major role in human societies throughout history and prehistory but with the development of modern civilization, use of allopathic drugs are at increasing rate and use of herbal drugs is either restricted to few communities or areas only. But there are several rural members of the family pockets where use of herbal drugs is the cheapest and only way for the treatment of different ailments. The traditional healers or medicine-men have their own diagnostic and treatment systems, which they have acquired from their ancestors and long history of use pattern. The information about medicinal plants is mainly

confined to the village physicians, chieftains of different communities. The area Bhatpar Rani under investigation, which was taken for ethno medicinal studies also, came into existence after holistic study of both castes group and able to write ethnographic description.

**Table 6 - Herbal remedies Ethno medicinal importance among Rajput and Sonar**

| Botanical name                 | Local name             | Flowering period   | Distribution               | Medicinal importance  |
|--------------------------------|------------------------|--------------------|----------------------------|---|
| <b>Acacia Catechu</b>          | Khair/ Kattha          | August-September   | forest areas               | Sore throat, ulceration, leprosy.   |

| <b>Ficus religiosa</b>       | Pipal      | April – May           | villages roadsides                       | blood purifier, skin diseases  |
| <b>Gossypium herbaceum</b>   | Kapas      | August- September     | Cultivated in some areas                 | malarial fever, leucorrhoea  |
| <b>Hibiscus rosa</b>         | Gudhal     | Throughout year       | gardens and near temples                 | cough, fever, urinary troubles   |
| <b>Hordeum vulgare</b>       | Jau        | December – January    | Cultivated in the area                   | stomach disorders, skin diseases.  |
| <b>Lablab purpureus</b>      | Sem        | September-October     | Cultivated as vegetable in the area      | used in cough and skin diseases  |
| <b>Lawsonia inermis</b>      | Mehandi    | August – November     | Commonly distributed in the forest areas | Headache, spleen disorders, skin diseases, leucoderma, cough and leprosy                             |
| <b>Mentha spicata</b>        | Podina     | May – June            | Cultivated in the area                   | used in gastro - intestinal disorders; cough, cold, cholera  |
| Botanical name               | Local name | Flowering period      | Distribution                             | Medicinal importance   |
| <b>Musa sapientum</b>        | Kela       | March – April         | throughout the area                      | dysentery, blood pressure, respiratory problems, diabetes  |
| <b>Ocimum sanctum</b>        | Tulsi      | October – February    | Commonly found in cultivated form        | Used in leucoderma, leprosy, fever, urinary trouble and diabetes;                                    |

| Botanical name                     | Local name     | Flowering period                  | Distribution                        | Medicinal importance  |
|------------------------------------|----------------|-----------------------------------|-------------------------------------|---|
| <b>Phyllanthus emblica</b>         | Awla / Aura    | March – April                     | forest areas and cultivated as well | Constipation,diabetesand washing hair                                     |
| <b>Psidium gujava</b>              | Amrud          | August- September / March – April | Cultivated in several areas         | bleeding gums , cholera and diarrhoea                                     |
| <b>Ricinus communis</b>            | Rendi / Arandi | September – October               | barren lands / wastelands           | skin diseases, piles and rheumatism                                       |
| <b>Rumex dentatus</b>              | Jangali Palak  | December – February               | Found near water bodies like ponds  | Leaves are used as laxative. Leaf paste is applied externally in sunburns |
| <b>Syzygium cuminii</b>            | Jamun          | March – April                     | Cultivated in the area              | Diabetes, diarrhoea dysentery and dental problems.                        |
| <b>Tagetes erecta</b>              | Genda          | October – March                   | Cultivated in the area              | Leaves are used in cut and wounds.  |
| <b>Tamarindus indica Linn</b>      | Imli           | May – June                        | Distributed throughout the area     | used in fever piles and gastric troubles                                  |
| <b>Trigonella foenum – graceum</b> | Menthi         | Oct – Nov                         | Cultivated in the area              | Seeds are used in rheumatism and diabetes.                                |
| Botanical name                     | Local name     | Flowering period                  | Distribution                        | Medicinal importance  |
| <b>Zizyphus mauritiana</b>         | Ber            | September – October               | Distributed in the forest areas     | used for washing wounds and diarrhoea                                     |

## 6. CONCLUSION

The human plant intimate relation dates back to the origin of human on this planet. With the development of social sense in primitive men, their dependence on the plant resources increased, not only for food, but also for fodder, fuel, drug and shelter. Conclusively, it can be said that on the basis of observations and analysis based on the study among Rajput and Sonar of Eastern U.P, the fact that indicates both sampled population is said to be vulnerable to several diseases and social problems. In general sampled population, have their own beliefs and practices regarding health. Rajput still believes that a disease is always caused by hostile spirits or by the breach of some taboo. They therefore seek remedies through magical religious practices. On the other hand, some people of Sonar have continued to follow rich, undocumented, traditional medicine systems, in addition to the recognised cultural systems of medicine such as Ayurveda, Unani, Siddha and Naturopathy, to maintain positive health and to prevent disease.

## 7. ACKNOWLEDGEMENT

I am very much privileged to complete my research paper under the supervision of respected Prof A.K.Kapoor and my sincere thanks to him, first of all for making this paper possible and for having such faith in me, even before it had begun, and also for inspiring conversations and comments throughout this whole process. I also accord my sincere thanks to University Grants Commission provide fellowship during my research.
